INFERTILITY IS TREATABLE

9% of the global population of reproductive age is estimated to be infertile. Fortunately, medical interventions may help women or couples achieve a successful pregnancy.

DEFINING INFERTILITY

WOMEN UNDER 35 YEARS OLD
A couple should see a doctor after trying unsuccessfully to conceive for 12 months.

WOMEN OVER 35 YEARS OLD
A couple should see a doctor after trying unsuccessfully to conceive for 6 months.

Most cases of infertility can be treated through one of these options:

- Drug Treatment
- Medically Assisted Reproduction
- Reproductive Surgery

OVERALL TREATMENT SUCCESS RATES

A patient’s journey can be daunting, but with current treatment options and advanced technologies in fertility clinics and laboratories, there is hope.

Globally, approximately 56% of women facing infertility issues seek medical assistance.

Over 80% of women under 38 years of age who undergo assisted reproductive treatment (ART) give birth according to figures reported in the USA.

Since 1978 over 5 million babies have been born thanks to IVF/ICSI.

OVERCOMING INFERTILITY

With patience and the appropriate treatment, it is possible to assist most couples with their dream to have a baby.
