**State-of-the-art contract manufacturing**

*AbbVie Contract Manufacturing* offers clients so much more than the typical CMO engagement.

**What are the main outsourced services that your company provides?**

Our contract development and manufacturing capabilities span drug product, fermentation, potent, prefilled syringe, hot melt extrusion, biologics and APIs.

**What differentiates your company from the competition?**

AbbVie Contract Manufacturing has been serving its partners for more than 35 years across 10 of its manufacturing facilities located in both North America and Europe.

**What value-added services does your company provide?**

By choosing AbbVie Contract Manufacturing, clients get so much more than the typical CMO engagement. Alongside its state-of-the-art cGMP manufacturing facilities, AbbVie’s partners gain integrated access to deep scientific expertise and processes that have successfully supported many small molecule and biologic medicines through to commercialisation.

AbbVie is a global, research-driven biopharmaceutical company committed to developing innovative advanced therapies for some of the world’s most complex and critical conditions. The company’s mission is to use its expertise, dedicated people and unique approach to innovation to markedly improve treatments across four primary therapeutic areas: immunology, oncology, virology and neuroscience. In more than 75 countries, AbbVie employees are working every day to advance health solutions for people around the world.

Combining the focus of a biotech with the expertise of an established pharmaceutical leader, the contract manufacturing business is agile and flexible in its service to companies outsourcing the development and manufacture of drugs.

AbbVie Contract Manufacturing’s development and manufacturing capabilities span both small and large molecule API, including classical fermentation, chemical synthesis and biologics. In addition to APIs, it offers extensive experience and technical solutions in the area of drug product manufacturing which includes traditional tablet and capsule production with emphasis on DEA controlled drugs, potent and hot melt extrusion. It can also package your product regionally and offer prefilled syringe manufacturing capabilities.
