Symptoms of RCC can include:

- Blood in the urine (haematuria)
- A persistent pain in the side of the body just below the ribs
- A lump or swelling in the area of the kidneys

RCC is a disease in which cancer cells form in tubules of the kidney.

Many kidney cancers do not produce any symptoms until the late disease stages.

Results from a recent survey by Kidney Cancer UK found that, unfortunately 70% of patients were diagnosed with RCC whilst having scans for unrelated conditions.

RCC is the most common type of kidney cancer, accounting for 80-90% of kidney cancers in the UK.

Around 11,900 new cases of kidney cancer are diagnosed every year in the UK, equivalent to 33 each day.

Incidence of kidney cancer across the UK and Ireland:

- **Scotland**: 1,060 men, 655 women
- **Northern Ireland**: 324 men, 189 women
- **Republic of Ireland**: 486 men, 174 women
- **England**: 9,900 men, 3,646 women
- **Wales**: 589 men, 232 women
